At a glance

A new storage product, machine type 1814 models 20A and 52A, has been added to IBM® Storage ServicePac® portfolio.

Overview

IBM ServicePac products offer a range of hardware maintenance or maintenance upgrade coverage in an electronic format. ServicePac is available through the same IBM Business Partners who sell the related IBM hardware. With these ServicePacs, you get an upgrade solution at the same time you purchase the IBM machine. The number of unique ServicePacs is kept to a minimum and each part number supports a range of machine types. To select the correct ServicePac for a particular machine type, a selection guide is available with a complete list of machine types for cross-reference. Alternatively, additional ServicePac information and prices can be found at

https://www.developer.ibm.com/cod/spst/servicepac/extProductSelectorWWW.do

ServicePacs can be ordered by part number through SAP in the same way other IBM products are ordered. The simple registration process ensures fast and efficient coverage. To be eligible for service, a ServicePac must be purchased within 30 days of the purchase of the machine type to which it applies. A ServicePac must be registered within 15 days of purchase by completing the ServicePac online registration at

http://www.ibm.com/servicepac

Availability date

August 25, 2009

Warranty service upgrade (WSU)

Warranty service upgrades enhance the level of service from the base warranty service associated with the machine type and model. A warranty service upgrade can include single elements or combinations of:

- Extended hours of coverage
- Upgraded service delivery method (SDM)
- Higher level of response time objective

Service delivery method

IBM On-site Repair (IOR): Repair is performed at the customer site. If the machine cannot be fixed with the help of IBM remote support, the repair activity is performed by an IBM representative at the customer's site.

The term *screening* refers an initial remote problem determination (PD) or problem source identification (PSI) activity on a customer's service request that is performed by technical support personnel. Typically, this is the first technical activity performed after the service request has been entered into the call management system and the customer has been entitled. Call screening results in the creation of the initial action plan to resolve the service request.

On-site service repair limited (IOL): Repair performed at customer site, excluding CRUs

Service is same as IOR, but the customer is responsible for replacement of Tier 1 CRUs.

ServicePac response time

The target response time for the completion of PD is an average of two hours from the customer's service request being registered in the IBM call management system. The four-hour on-site response time of some ServicePacs is defined as the period of time between the end of screening and the service representative arriving at the

customer's machine location for repair. The sum of the two elements, two hours PD plus four hours IOR after PD, is the on-site response time target, which is consistent with the service description for same-business-day (SBD) coverage. The average target on-site response time is six hours, which is equal to a two-hour average target for PD and four-hour average target for IOR after PD. It should be noted that average targets are set for guidance and that actual times will vary by complexity of service request.

Hours of coverage

- 9 x 5 coverage - 9 hours per day, Monday through Friday, excluding public and national holidays
- 24 x 7 coverage - 24 hours per day, Monday through Sunday, 365 days a year

Limitations with respect to replacements or to parts for services upgrades: Products classified as consumable supplies, such as peripheral devices and accessories like external displays, are not covered by this service.

Repair parts and replacement machines, which may be furnished on an exchange basis, may not be new, but will be in good working order. All replaced parts and machines become the property of IBM. Some parts of IBM machines are designated as customer replaceable units (CRUs), enabling you to replace these parts. CRU information and replacement instructions are shipped with your IBM machines and are available from IBM at any time on your request. You may be offered to install a CRU yourself or you may request IBM to install it as part of this service. You must return all defective CRUs to IBM in accordance with the return instructions issued with the replacement CRU. Certain machines require machine code or licensed internal code (LIC), such as microcode or system code, to correctly function. For such machines, you are responsible for downloading designated machine code and LIC updates from an IBM Web site or from other electronic media, and following the instructions that IBM provides.
